

# How migrate pipeline and template Doc

We will use Dev tools to do migrate pipeline and template . Login kibana and go to list to find Dev tools under Management . Then we can use Elastic command in here .

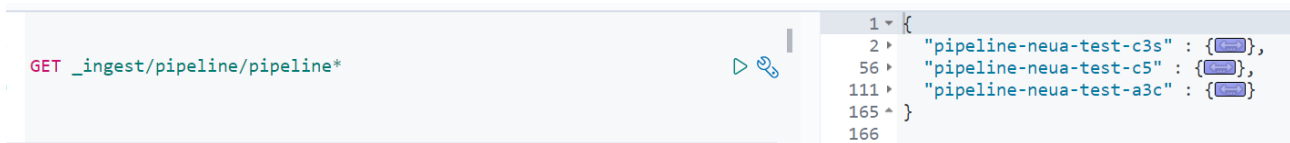

Now we can search our pipeline and template in elk

```
GET _ingest/pipeline/{{pipeline_name}}
```

```
GET _template/{{template_name}}
```

```
GET _ingest/pipeline/pipeline*
GET _template/template*
```

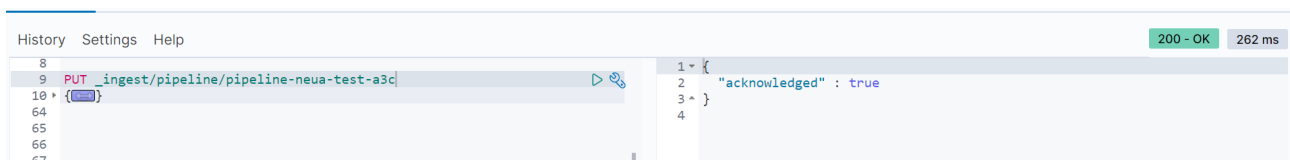

Copy your pipeline or template and go to new ELK kibana dev tools to put your pipeline or template

```
PUT _ingest/pipeline/{{pipeline_name}}
{{your_pipeline_json}}
```

```
PUT _template/{{template_name}}
{{your_template_json}}
```

```
PUT _ingest/pipeline/pipeline-neua-test-c3s
{{your_pipeline_json}}

PUT _template/template-neua-test
{{your_template_json}}
```

You can see acknowledged at result . Please use GET command to check your pipeline and template is already put in to setting .
